TFPT verification suite: the journey of ~300 machine-checked scripts

v1-v23 - Foundations
carrier D5+A3+mu4, E8 glue, alpha^-1 fixed point,
anchor a=(1,1,2) -> {c3,g_car} reduce to {a,pi}

v24-v53 - Standard-Model readouts
phi0 mass ladder, flavor (Q,K,R,L), lepton/quark
ratios, hypercharge, compiler core (5,3)

v54-v100 - Seam = horizon
one-sided Gauss-Bonnet c3=1/(8pi), Coxeter-30 cycle,
gapped attractor (2/3)^6, frozen registry + null-MC

v101-v140 - Horizon + flavor geometry
Nariai=anchor, monodromy=W(A3)=S4, cusp
weights {0,1/3,2/3}, H^1 cohomology, canonical map

v141-v158 - R1-R5 + premise (A)
deck selection, EH mechanism, No-Unit Theorem,
simple-current (E8)1, free c=8 fixed point isolated/stable

v159-v169 - PyR@TE cross-checks
SM gauge/Yukawa/Higgs RGEs confirmed (b1=41/10),
Lambda_QCD, m_H near-criticality, eta_B leptogenesis

v170-v174 - AQFT bridges
E8 slice compression, OS moment/Sugawara, trace
anomaly seed 4/3, strong-CP Pfaffian, Fock readings

v175-v181 - AQFT closure -> geometric bedrock
net existence + full-cone RP [E];
residual -> one premise: carrier mu4 clock = seam conformal deck

v182-v213 - F_transfer functor + frontier
reviewer residual map; F_transfer = one typed
functor (Koide, eta_B, axion, m_p/m_e) + machine guard

v214-v218 - Pillowcase + Sheet Diamond
QGEO pillowcase (cross-ratio 2 => j=1728), four
marks from Gauss-Bonnet, the Sheet Diamond axis geometry

v219-v237 - Icosahedral capstone
McKay why {2,3,5}, CM norms 41/7, CP triality, Kleinian
seam, det K=1 = Kitaev E8; the (2,3,5) Brieskorn generates ALL

v238-v261 - NCG / Modular Spectral Closure
96-dim spectral triple, Dirac = covariance induction,
cutoff = KMS weight, seam/carrier/E8 on one K3: one relative object

v262-v275 - Frontier closure + QFT4D fork
F_QCD m_p/m_e, M_nu seesaw, S_pert (EG, 1-loop + gauge
betas), scale over-determination, the QG.AMB roadmap

v276-v299 - The Gral: SEAM.EQUIV.01 + Flat-Away
seam = (E8)_1 at tau=i named as ONE theorem;
both routes reduced to one shared input (Flat-Away), heat a2 proved+Lean (v295/v296)

v300-v302 - Closing arc: residual pinned
Flat-Away hard+pin from (E8)_1 (v300); Route A invertible
via free fermions (v301); gap = derived 6ln(3/2)>0 (v302); no TFPT-internal assumption left
